First Office Action on the Merits of a RCE

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on November 10, 2009 has been entered.

2. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Status of the Application

3. Claims 57, 70, 71 and 88 are pending in the present application. The instant claims stand rejected as indicated below.

Claim Rejections - 35 USC § 103

4. The rejection of claim 77 under 35 USC 103(a) over Mayhem et al. (US 5,580,899) is made moot by the cancellation of the instant claim.

5. The rejection of claims 57, 70, 71 and 88 under 35 USC 103(a) over Mayhem et al. (US 5,580,899) is withdrawn.

6. Claims 57, 70, 71 and 88 are rejected under 35 U.S.C. 103(a) as being unpatentable over Saulnier et al. (EP 320988, 1989).

Saulnier et al. teaches etoposide 4-O-acyl derivatives of the structure:

(XII)

having potent antitumor activity (see the entire article, especially page 6, line 41 – page 7, line 31). The reference teaches Y is selected from a group inclusive of “-C(O)-R³” wherein R³ can be C₂₋₂₀ alkenyl (see page 7, lines 19-21). Saulnier exemplifies a number of compounds including

5

Example 11).

The instant claims differ from the reference by reciting the corresponding 9-monounsaturated fatty acid derivatives. However, Saulnier defines “alkenyl” as straight or branched carbon chains having at least one double bond (see page 8, lines 4-5). C-9 monounsaturated fatty acids such as oleic acid and elaidic acid, like linoleic acid, are well known in the art (reference will be provided upon request). Therefore, it would have been obvious to the skilled artisan in the art at the time of the present invention to select any of the species of the genus taught by the reference, including that of the instant claims, because an ordinary artisan would have the reasonable expectation that any of the species of the genus would have similar properties and, thus, would be potent antitumor agents as taught by Saulnier et al.
